

**Remsdaq**  
StarWatch

The StarWatch security system is an integrated platform comprising access control, CCTV/DVR management, photo ID badge production and security management. The system now features dynamic hot switch language support. Card production is handled through an integral badge management system that features advanced card design options. Comprehensive video management solutions allow PTZ control of CCTV cameras and replay of pre- and post-alarm video. *Remsdaq.*

**ATEME**  
VSIP4

The VSIP4 H.264 video security solution is a compact, four-channel IP A/V encoder with Dynamic Network Adaption (DNA) technology. The VSIP4 features a high-density video matrix and is designed to adapt to existing network infrastructures. DNA not only reduces network bit rates, but also enhances the encoder by providing better video quality for sensitive security situations including highways, airports, public transportation systems and urban areas. Using a DSP-based hardware platform, VSIP4 uses compression technology to optimize video quality while benefiting from intelligent encoding features such as alarm generation. *ATEME.*

**Waterfall Solutions Ltd.**  
IP Surveillance Enabler

Waterfall Solutions' IP Surveillance Enabler provides a robust, foolproof and cost-effective solution to the inherent security risks of IP surveillance by allowing surveillance endpoints to connect to the internal networks via an impenetrable unidirectional connection, implemented using a unique, patent-pending technology. The WF-ISE Plus carries the added functionality of PTZ control without diminishing the system's security. *Waterfall Solutions Ltd.*

**Yoggie Security Systems**  
Gatekeeper Card Pro

Gatekeeper Card Pro™ is a laptop embedded mini-computer designed to provide comprehensive Internet security. The mini-computer contains 13 best-of-breed security applications built into the miniature card, which is inserted directly into a laptop's ExpressCard slot, allowing users to benefit from security wherever they connect. Gatekeeper Card Pro is a full-blown computer with its own processor, memory and hardened operating system. The product enables IT security managers to provide laptops with full corporate-level security already discretely installed. *Yoggie Security Systems.*

# Entry Sentry.

*Smarter design. Tighter security.*  
*New tailgate detection from DSI.*

DSI, the leader in tailgate detection technology, introduces **Entry Sentry**, an unsurpassed tailgate detection system that offers:

- Unrivaled detection technology with **32 infrared sensors**
- **Flexibility** to set off local or remote alarms and trigger door locks
- Advanced sensor technology that **recognizes inanimate objects**
- **Adjustable sensitivity** to eliminate false alerts
- Versatile and **cost-effective** installation options

**Entry Sentry** from DSI integrates with access control systems and delivers a comprehensive tailgate detection system that is affordable and easy to install.
